

# Stringing the whippetree

Place the whippetree on the back of the gripper box with the four holes facing the palm and the smoothest surface touching the gripper box. You'll need to hold it there while stringing the remaining fingers. Pass the thread from the ring finger through hole 3 on the whippetree and back out though hole 4. Now thread it into the fifth hole from the thumb side on the back of the palm and down through the pinkie fingertip as you did with the other fingers. Don't tie a knot at the end yet!
